[Charge oscillations in ionic liquids: A microscopic cluster model](#)

Yael Avni, Ram M. Adar, and David Andelman

[Phys. Rev. E **101**, 010601\(R\) \(2020\)](#)

The microscopic model of ionic liquids presented in this work reproduces many features previously observed in experiments and simulations. The effective mean-field theory obtained from this model shows that ionic pairs lead to short-range charge oscillations near an interface and that more complex clusters can lead to long-ranged oscillations.
